**Subject:** Cornell-Dubilier Electronic Site  
Data Validation Assessment

**Date:** August 4, 1997

The purpose of this memo is to transmit the following information:

- Data validation results for the following parameters:

PCB 21 samples

- #### • Matrices and Number of Samples

## Soils 21 sample

- Sampling dates: 26 & 27 June, 1997

The final data assessment narrative and original analytical data package are attached.

MEMORANDUM

DATE: 4 August, 1997

TO: Eric Wilson, OSC  
USEPA Region II

FROM: Ed Moyle  
START Data Review Team

SUBJECT: QA/QC Compliance Review Summary

As requested quality control and performance measures for the data packages noted have been examined and compared to EPA standards for compliance. Measures for the following general areas were evaluated as applicable:

Data Completeness  
Spectra Matching Quality  
Surrogate Spikes  
Matrix Spikes/Duplicates  
Calibration

Blanks  
DFTPP and BFB Tuning  
Chromatography  
Holding Times  
Compound ID (HSL, TIC)

Any statistical measures used to support the following conclusions are attached so that the review may be reviewed by others.

Summary of Results

	I Volatile	II B/N/A	III Pesticide	IV Metals + CN
Acceptable as Submitted	_____	_____	_____	_____
Acceptable with Comments	_____	_____	X	_____
Unacceptable, Action Pending	_____	_____	_____	_____
Unacceptable	_____	_____	_____	_____

## **NARRATIVE**

**CASE No. 1331**

**SITE NAME:** Cornell-Dubilier Electronics Site

**333 Hamilton Boulevard, South Plainfield, New Jersey**

**Laboratory Name:** ICM Labs

### **INTRODUCTION:**

The laboratory's portion of this Case consisted of 21 grab low concentrate soil samples collected on 26 & 27 June, 1997.

The laboratory reported No problem(s) with the receipt of these samples.

---

---

The laboratory reported No problems with the analyses of PCB organic compounds.

---

---

The evaluator has commented on the criteria specified under each fraction heading. All criteria have been assessed, but no discussion is given where the evaluator has determined that criteria were adequately performed or require no comment. Details relevant to these comments are given on the following forms.

## **Evaluation by Fraction**

## **Functional Guidelines for Evaluating Organic Analysis**

**CASE # 01970**

**SDG # Groups #01**

**LAB: ICM Labs**

### **SITE Cornell-Dubilier Site**

**The current Functional Guidelines for evaluating organic data have been applied.**

All data are valid and acceptable except those analytes which have been qualified with a "J" (estimated), "N" (presumptive evidence for the presence of the material), "U" (non-detects), "R" (unusable), or "JN" (presumptive evidence for the presence of the material at an estimated value). All action is detailed on the attached sheets.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant QC problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

**Analytical data qualified as "JN" or "R" may not be used to demonstrate compliance with Toxicity Characteristic or Land Ban Regulations.**

**Reviewer's  
Signature:**

 Date: 8/8/1997

**Client identification (ID) and laboratory ID numbers:**

The Cornel-Dubilier Electronics Site was sampled by START on 26 & 27 June, 1997. This sampling event, consisted of 23 soil samples, (including a field duplicate) and two MS/MSD sample volumes. The samples were supplied to ICM Laboratories. The laboratory verified on the Chain of Custody that samples were received intact and in good condition. The US EPA Region II START personnel were requested to provide data validation services for the completed laboratory data.

The grab samples were analyzed as SDG-01 Sample Delivery Groups (SDGs) for analysis by the laboratory.

**26 June, 1997 Sample Collection - Samples**

**Client ID No & Laboratory ID No.**      **Matrix**

<b>SDG - 01</b>		<b>Matrix</b>
CDE-001	266311	Soil

CDE-020	266330	Soil
CDE-021	266331	Soil

Sample CDE-05 was designated for MS/MSD. Sample CDE-02 is a field duplicate of CDE-01.

**METHOD**

The samples were analyzed for PCB only by the US EPA - SOW OLM03.2 method.

**1. HOLDING TIMES:**

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects (sample quantitation limits) will be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

The following analytes in the samples shown were qualified because of holding time:

No sample analytes were qualified for holding time criteria.

**2. BLANK CONTAMINATION:**

Quality Assurance (QA) blanks [i.e., method, trip, field or rinse blanks] are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field and rinse blanks measure cross-contamination of samples during field operations. If the concentration of the analyte is less than 5 times the blank contaminant level (10 times for common contaminants), the analytes are qualified as non-detects, "U". The following analytes in the samples shown were qualified with "U" for these reasons:

**A) Method Blank Contamination**

No qualifications were required.

**B) Field or Rinse Blank Contamination ("water blanks" or "distilled water blanks" are validated like any other sample)**

N/A.

**C) Trip Blank Contamination**

N/A

**D) TIC Blank Contamination**

N/A

**3. MASS SPECTROMETER TUNING:**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds, and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The tuning standard for volatile organics is bromofluorobenzene (BFB) and for semi-volatiles is decafluorotriphenyl-phosphine (DFTPP).

If the mass calibration is in error or missing, all associated data will be classified as unusable "R". The following samples shown were qualified with "R" because of tuning:

N/A

**4. CALIBRATION:**

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument is giving satisfactory daily performance.

**A) Response Factor:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for the VOA/BNA Target Compound List (TCL) must be  $\geq 0.05$  in both the initial and continuing calibrations. A value  $\leq 0.05$  indicates a serious detection and quantitation problem (poor sensitivity). If the mean RRF of the initial calibration or the continuing calibration has a response factor  $< 0.05$  for any analyte, those analytes detected in environmental samples will be qualified as estimated "J". All non-detects for those compounds will be rejected "R". The following analytes in the samples shown were qualified because of response factor:

**Initial Calibration**

No qualifications were applied.

**Continuing Calibration**

No qualifications were applied.

**5. CALIBRATION:**

**B) PERCENT RELATIVE STANDARD DEVIATION (%RSD) AND PERCENT DIFFERENCE (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be < 30% and %D must be < 25%. A value outside of these QC limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J"; and non-detects are flagged "UJ". If %RSD and/or %D grossly exceed QC criteria, non-detect data may be qualified "R".

For the PESTICIDE/PCB fraction, if %RSD exceeds 20% for all analytes except for the 2 surrogates (which must not exceed 30% RSD), qualify all associated positive results "J" and non-detects "UJ".

The following analytes in the samples shown were qualified for %RSD and %D:

**Initial Calibration**

No qualifications were applied.

**Continuing Calibration**

No qualifications were applied.

**6. SURROGATES/SYSTEM MONITORING COMPOUNDS (SMC):**

All samples are spiked with surrogate/SMC compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate/SMC concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below. The following analytes for the samples shown were qualified because of surrogate/SMC recoveries:

Based on the dilutions required for analysis no qualifications were required.

**7. INTERNAL STANDARDS PERFORMANCE:**

Internal standard (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to 100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than  $\pm$  30 seconds from the associated continuing calibration standard. If the area count is outside the -50% to 100% range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated "J", and all non-detects as "UJ" only if the IS area is < 50% Non-detects are qualified as "R" if there is a severe loss of sensitivity (< 25% of associated IS area counts).

If an internal standard retention time varies by more than 30 seconds, the reviewer will use professional judgement to determine either partial or total rejection of the data for that sample fraction. The following analytes in the samples shown were qualified because of internal standard performance.

N/A

**8. COMPOUND IDENTIFICATION:**

**A) VOLATILE AND SEMI-VOLATILE COMPOUNDS:**

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within + or - .06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound. For the tentatively identified compounds (TIC) the ion spectra must match accurately. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identification.

N/A

**B) PESTICIDE COMPOUNDS:**

The retention time of the reported compounds must fall within the calculated retention time windows for the two chromatographic columns and a GC/MS confirmation is required if the concentration exceeds 10 ng/ml in the final sample extract. The percent difference (%D) of the positive results obtained on the two GC columns would be  $\leq 25\%$ . The following analytes in the samples shown were qualified because of compound identification:

Analytes J qualified due to moderately poor column agreement ( $> 25\% D$ ) as questionable

Aroclor 1254 in sample CDE-07DL, 015DL, and 017

Analytes JN qualified for very poor column agreement ( $> 50\% D$ ) ( presumptive positive)

Aroclor 1254 in sample CDE-01DL, 05, 08DL, 010, 010DL, 013, 014, 015, 019, 020,

Analytes R qualified (Rejected) due to severely poor column agreement ( $> 90\% D$ )

Aroclor 1254 in sample CDE-001, 003, 004, 006, 007, 008, 009, 012, and 021

**9. MATRIX SPIKE/SPIKE DUPLICATE, MS/MSD:**

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD may be used in conjunction with other QC criteria for some additional qualification of the data. The following analytes, for the samples shown, were qualified because of MS/MSD:

No qualifications were required for this parameter.

**10. OTHER QC DATA OUT OF SPECIFICATION:**

N/A

**11. SYSTEM PERFORMANCE AND OVERALL ASSESSMENT:**

N/A

**12. CONTRACT PROBLEMS    NON-COMPLIANCE:**

N/A

13. This package contain re-extraction, re-analysis or dilution results. Upon reviewing the QA results, the following Form I(s) are identified to be used

**SDG - 01**

Use sample data CDE-01, Do not use CDE-01DL\*  
Use sample data CDE-02, Do not use CDE-02DL  
Use sample data CDE-07, Do not use CDE-07DL\*

Samples: 266311 - 266331

NONCONFORMANCE SUMMARY

This project is only for PCB's, although the forms reflect pesticide results as undetected, they were not analyzed for and do not appear on the quantitation reports.

Pesticide/PCB:

- 1) Columns : a) J & W Scientific, DB608, 30m x 0.53 mm, 0.83 film thickness  
b) J & W Scientific, DB1701, 30 m x 0.53 mm, 1.0 film thickness

2) Symbols used on Pesticide/PCB quantitation reports:

OW = Outside of retention window

NC = Not confirmed by secondary column

<CRQL = Less than Contract Required Quantitation Limit

<0.5 CRQL = Less than one half the Contract Required Quantitation Limit

NP = No Pattern present

- 3) The following compounds had Matrix Spike/Matrix Spike Duplicate recoveries outside QC limits, for sample CDE05: gamma-BHC (45 and 45%). For sample CDE04: gamma-BHC (42 and 45%). As per the SOW no further action was required.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

## PESTICIDE ORGANICS ANALYSIS DATA SHEET

EPA SAMPLE NO.

CDE19

Lab Name: ICM

Contract:

Lab Cst: ICM

Case No.:

SAS No.:

SDG No.: CDE01

Matrix: (soil/water) SOIL

Lab Sample ID: 266329

Sample wt/vol: 30.1 (g/mL) G

Lab File ID: CA0724

Moisture: 5. decanted: (Y/N) N

Date Received: 06/27/97

Extraction: (SepF/Cont/Sonc) SONC

Date Extracted: 07/01/97

Concentrated Extract Volume: 500.0 (uL)

Date Analyzed: 07/14/97

Injection Volume: 1.0 (uL)

Dilution Factor: 1.0

GPC Cleanup: (Y/N) Y pH: 8.6

Sulfur Cleanup: (Y/N) N

CAS NO.	COMPOUND	CONCENTRATION UNITS: (ug/L or ug/Kg)	ug/Kg	Q
